

AI4T  
AI FOR TEACHERS

# AI4T, a pioneering project for AI in education: Background, implementation and results

# The AI4T project

## Why?

- Support secondary school teachers in the use of AI in the classroom.
- Create a professional learning pathway that promotes the meaningful use of AI resources in the classroom.
- Conduct an independent evaluation of the professional learning pathway to guide public policies

## For whom ?

Teachers of **mathematics**, **science**, and **modern languages** with classes of students aged 15-17.

## What?

From **November 2022 to June 2023**, a total of **1,005 teachers from 322 schools in five countries** participated in the AI4T large scale experimentation, which included a MOOC, an open textbook, webinars and face-to-face sessions.

# The evaluation

## The evaluation findings shed light on:

- the state of teachers' knowledge, perceptions and use of AI in five countries at the beginning of the experiment
- the impact of providing professional learning pathways to teachers on their knowledge, perceptions and use of AI in five countries
- the factors influencing the successes or failures of the intervention and the adjustments that could be made based on teachers' and school leaders' insights

# The evaluation method

- **A randomized controlled trial:** comparison between a group of teachers taking part in the professional learning pathway and a control group
- **A variety of evaluation instruments:** surveys, interviews, digital traces
- **A theoretical framework and quantifiable outcomes** based on existing research on digital technologies, AI and professional learning

# Sample

|   |                        | France | Ireland | Italy | Luxembourg | Slovenia | Total        |
|---|------------------------|--------|---------|-------|------------|----------|--------------|
| <i>Number of teachers</i>                 |                        | 180    | 14      | 275   | 10         | 257      | <b>736</b>   |
| <i>Percentage of teachers per subject</i> | <i>Math</i>            | 55%    | 50%     | 31.6% | 30%        | 44.3%    | <b>42.1%</b> |
|   | <i>Modern language</i> | 40.6%  | 43%     | 35.6% | 50%        | 35.8%    | <b>37.2%</b> |
|   | <i>Other</i>           | 4.4%   | 7%      | 32.8% | 20%        | 19.9%    | <b>20.7%</b> |

**Particularity:** volunteer teachers

# Teachers' pre-experiment perceptions, knowledge and use of AI

# Teachers' pre-experiment perceptions of AI

# Teachers' pre-experiment knowledge of AI

How would you rate your knowledge of AI?

Can you give an example of an AI tool that could be used for an educational purpose? (all countries)

# Teachers' pre-experiment use of AI

Teachers' use of AI tools for education

33% of Slovenian math teachers used Photomath and 51% asked their students to use it

58% of language teachers used machine translators (all countries)

# Evaluation of the professional learning pathways

Co-funded by the  
Erasmus+ Programme  
of the European Union

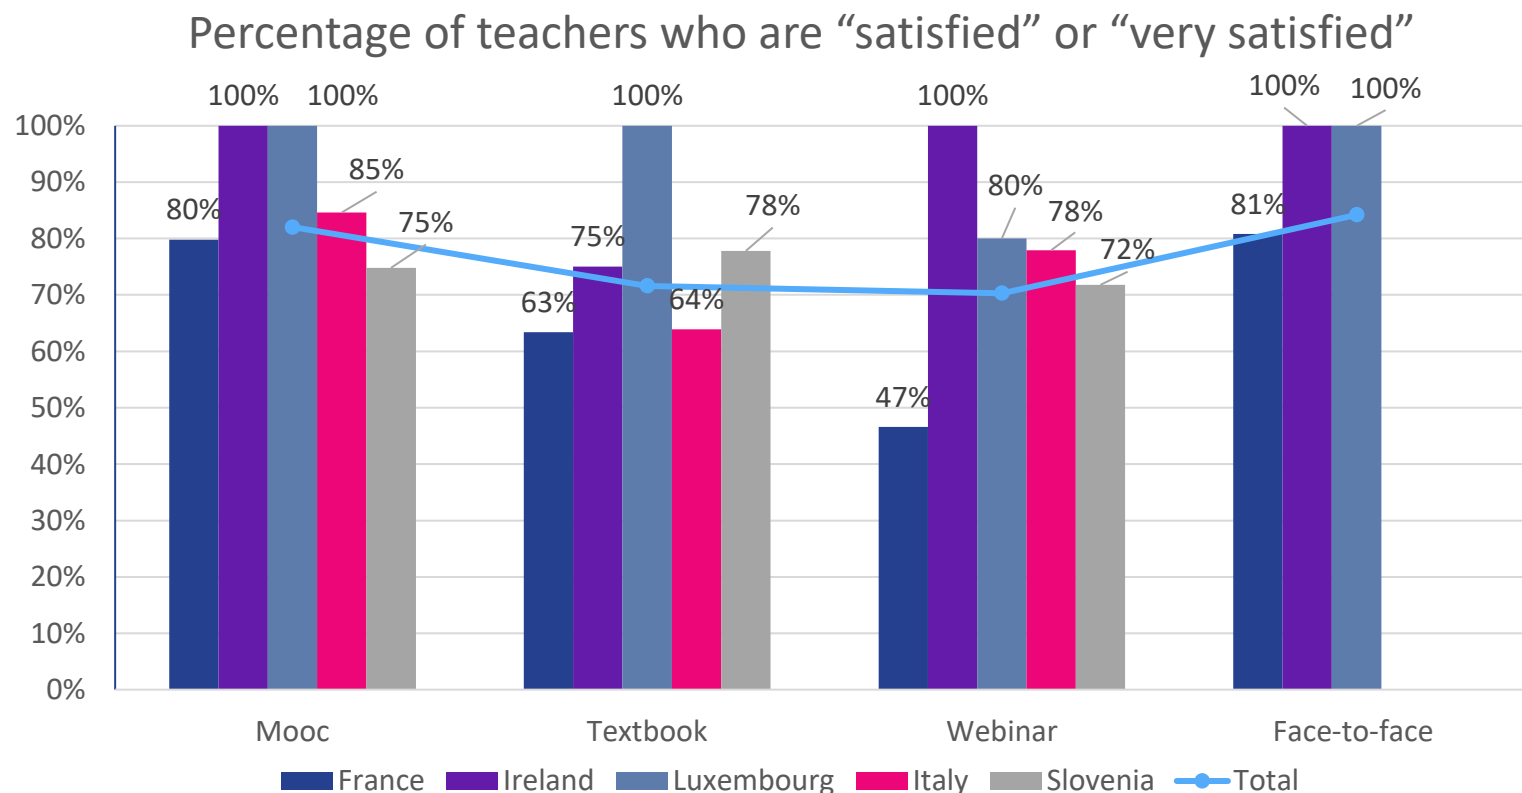

le cnam  
Cnesco

AI4T  
AI FOR TEACHERS

# Satisfaction with the intervention

**Reasons why teachers were satisfied:**

- Quality of content*
- Quality of pedagogical team*
- Peer-to-peer interactions*
- Blended-learning (and interactive webinars in Italy)*

# Impact of the intervention on teachers' knowledge of AI

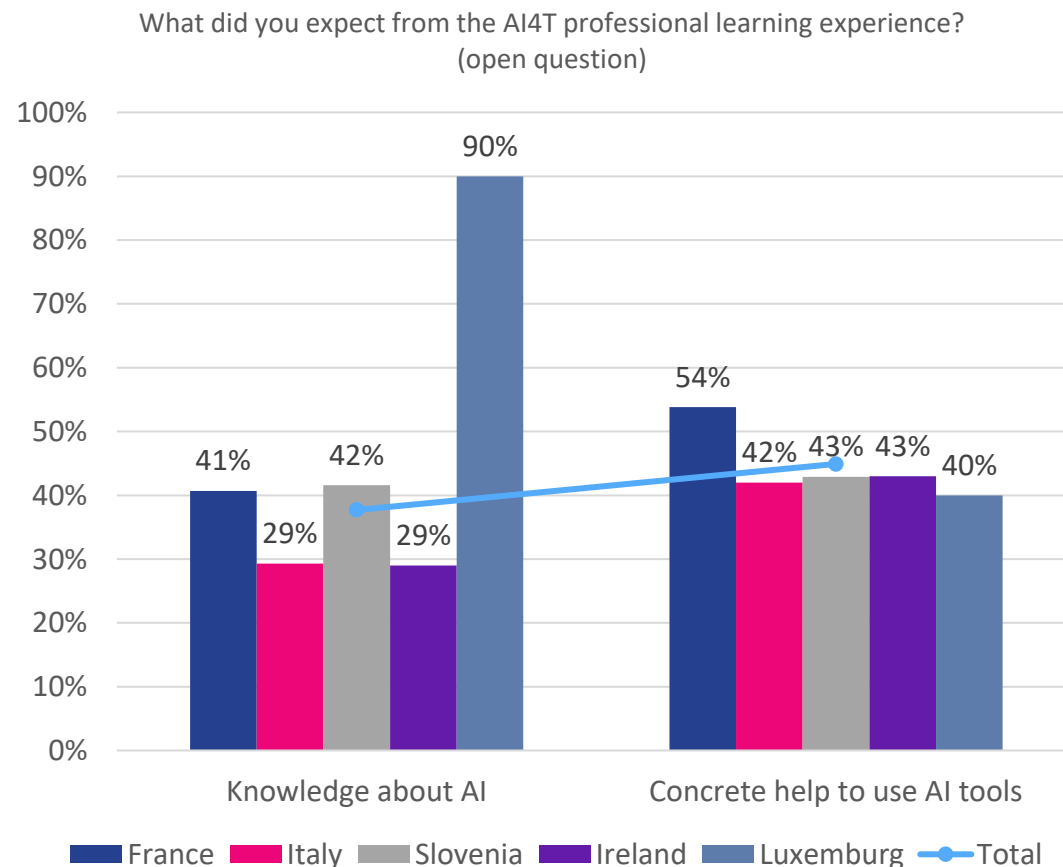

| Countries* | Self-assessment of knowledge of AI | Knowledge of how AI works | Familiarity with AI technologies | Identification of AI tools as AI |
|------------|------------------------------------|---------------------------|----------------------------------|----------------------------------|
| France     | ↗                                  | n.s*                      | ↗                                | ↗                                |
| Italy      | ↗                                  | ↗                         | ↗                                | ↗                                |
| Slovenia   | ↗                                  | ↗                         | ↗                                | ↗                                |

*“I learned a lot. What AI is, how it works, how to use it. I’ve also had a glimpse of the future – where education is going.”*

\*In Ireland and Luxemburg, similar trends were observed on all indicators.

\*n.s: non-significant

# A demand for more practicality

*“I expected more concrete situations from the classroom. How to apply this in a concrete situation. Not so much the theoretical part, although I know we need to know that too. But I would have liked to have been told: in the second year, when dealing with vectors, we can do this and that with the help of AI.”*

# Impact of the intervention on teachers' use of AI

|   | Use of AI | Frequent use of AI | Intention to use AI | Use of Kwyk | Use of Vittasciences |
|---|-----------|--------------------|---------------------|-------------|----------------------|

# Main barriers for the use of AI

## Access to AI tools is complicated by:

- Licence fees
- Non-compliance with GDPR and/or directives from administrative authorities prohibiting the use of specific tools
- Tools not tailored to specific school types or grade levels

*“We talked about ChatGPT, things like that, but it's a bit delicate to use it. We haven't really discovered a tool that we can use well, authorized by everyone, I believe.”*

# AI integration in the schools

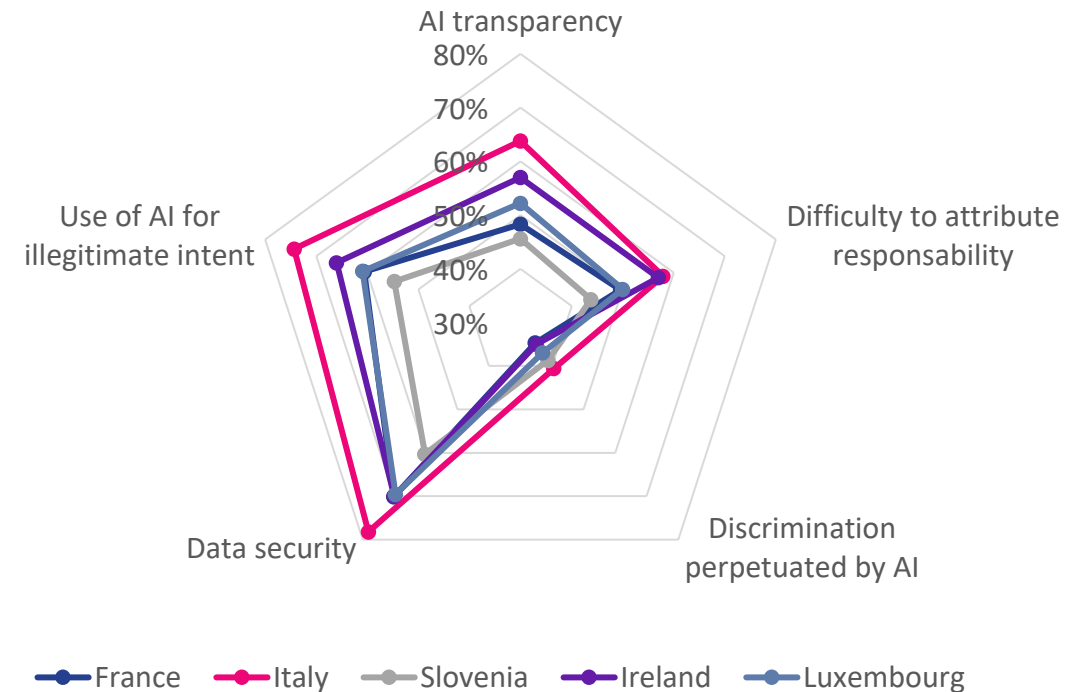

# What about students?

Do you know what AI is?

Student awareness of ethical issues

# Summary

## Teachers' pre-experiment perceptions, knowledge and use of AI

- Positive attitude towards AI for education
- Moderate knowledge of AI
- Limited use of AI tools for education

## Impact study

- Generally no impact on teachers' perceptions of AI
- Significant impact on teachers' knowledge of AI
- Limited impact on AI use

## Feedback from participants

- High level of satisfaction with each part of the professional learning pathways
- Demand for more practical aspects
- Limited access to AI tools
